

1,285 training flows · 400 source calls · no call ID

Flow = 5 packets
(length, arrival time)

Pseudo-group key

Round length tuple to 8 B

Round $\log_{10}(\text{duration})$ to 1 decade

join

1,107 pseudo-groups
253 flows (20%) share a group

Leakage mechanism

Sibling flows from one call
are near-identical

Plain stratified K-fold
splits siblings across folds

Optimistic score
(memorised call, not model)

Our protocol

StratifiedGroupKFold
over pseudo-groups

Siblings forced into one fold

Decisive metric
= grouped CV
